

AQUAKLEEN® COUNTERTOP FILTER

Portable and easy to fit. Clean, clear, sparkling water when and where you want it.

Your **Aquakleen®** water filter...

- RETAINS essential minerals
- ENHANCES the taste of drinking water, tea, coffee and cooking
- Improves digestion and general health
- ASSISTS weight loss by accelerating fat burning process
- ELIMINATES unpleasant taste and odour by reducing organic impurities plus chlorine and associated compounds. Suspended matter, which causes cloudiness and discolouration, is also removed.

This countertop unit attaches easily and quickly to your kitchen tap and can be placed on a bench or shelf. It is fitted with a diverter valve, which allows filtered water or unfiltered water to be drawn without removal of connecting hose.

No plumber required.

Complete with a premium heavy duty moulded granular activated carbon cartridge to remove dirt, rust, scale, hair and other suspended contaminants. It also reduces chlorine and harmful chemical contaminants.

INSTALLATION:

1. Unscrew and remove the aerator from the tap located on your sink top.
2. If your tap has an internal (female) thread, simply screw the stainless steel diverter assembly into the end of your sink tap. If your tap as an external (male) thread, screw the adapter into the diverter first, and then screw the diverter assembly into the end of your sink tap.
3. Screw this onto your tap, as tightly as possible by hand. You will need to tighten it further, using pliers, to prevent water from escaping at the point of the join, when the tap is turned on.

USING YOUR WATER FILTER

Push the button on the diverter to use tap water, and pull it out to enjoy water from your water filter.

REPLACING CARTRIDGES

In order that your water filter provides you with safe, great tasting drinking water, your filter cartridge should be replaced every 12 months.
