Ideal for Gravity Water Filters such as, Stoneware, Atlantis, Stefani, Australis and Vitali.

Waterco Ceramic Cartridges are made of micro-porous ceramic material, internally coated with an antibacterial treatment of Silver Nitrate. Within the Waterco Ceramic Cartridge is a Granular Activated Carbon Core. The ceramic media and Granular Activated Carbon work together to significantly reduce:

- Bacteria and Cysts (E.coli, Giardia and Cryptosporidium)
- Suspended Solids (Dirt, Rust and Algae)
- Chlorine/Chloramines (Taste problems)
- Hydrogen Sulphide (odour problems)
- Organic Pesticides (Lindane)

These filters offer a 2 stage purifying process:

1. The Ceramic Filtration - During this stage the microporous ceramic membrane is capable of filtering micro organisms, dirt, rust algae and other suspended solids.
2. The Granular Activated Carbon - During this stage the carbon's extensive pore structure, enables it to screen every drop of water passing through and efficiently absorb chlorine, taste, odours and organic chemicals

Cleaning the Ceramic Cartridge

The ceramic cartridge must be cleaned regularly and replaced periodically. Cleaning simply involves scraping the cartridge under running water. Once the surface is white, the cartridge is ready for use again.

- Average life of
4-6 months
(WP5800)
